# **Labor Supply Factors and Labor Availability for the Columbus (Platte County) Labor Area**

## **Executive Summary**

The information provided in this report indicates that a prospective new employer providing job opportunities with competitive wages and benefits and offering career opportunities would be a welcome addition to the employment base in Columbus and the Platte County Labor Area. The response to such employment opportunities would be substantial, and as this report shows, there is a sizeable labor force and population base living within the Columbus Labor Study Area. Some of the pertinent findings of the report include:

- Population in the Columbus Labor Study Area (Platte County plus the eight contiguous counties) totaled 115,850 people in 2022, with the Platte County population totaling 34,296. Population growth in Platte County remained flat during the period 2020-2022, compared to a population decrease of 0.4 percent for the eight-county Columbus Labor Study Area as a whole.
- The Columbus Labor Study Area labor force totaled 64,496 in 2021, with 63,097 local residents employed in jobs either within or outside the area. A total of 56,490 persons were employed in nonfarm wage and salary jobs<sup>1</sup> located within the area.
- In 2020, 5,754 primary jobs (36.0 percent) held by Platte County residents were located outside Platte County. This confirms many Platte County residents are commuting to jobs in other counties.
- Average annual wages for all nonfarm wage and salary employees in the Columbus Labor Study Area were \$47,725. For Platte County, average annual wages were \$47,853. Both Platte County and Columbus Labor Study Area wages were lower than the Nebraska average annual wages of \$53,925.

The basic conclusion of this report, which follows from the data and analysis presented, is that the Columbus Labor Study Area and Platte County would be able to provide a significant number of dedicated and skilled workers to meet the needs of additional employers in the area. While this report has not estimated a precise number of people that

---

<sup>1</sup> Nonfarm wage and salary employment data are derived from businesses subject to State unemployment insurance laws and from Federal agencies subject to the Unemployment Compensation for Federal Employees Program. Nonfarm wage and salary employment data includes 99.7 percent of wage and salary civilian employment. Self-employed workers, unpaid family workers, workers in certain not-for-profit organizations, and several other small (primarily seasonal) worker categories are not included.

may be available for a prospective new employer in the Columbus area, it is anticipated that if attractive working conditions with competitive wages and employee benefits were offered, a prospective new employer would be able to select their workforce from a substantial pool of applicants.

## Labor Supply Factors and Labor Availability for the Columbus (Platte County) Labor Area

This report presents selected labor-related and demographic data that provide insights into the labor supply situation in Columbus (Platte County) and the surrounding area.

In reviewing the data presented in this report, it will be evident that the Columbus Labor Study Area has a sizeable pool of labor to provide for the labor requirements of additional employers in the area, both in the near term and over the long run. Data presented in this report includes tables on labor force, employment, and population for Platte County and for the surrounding counties that make up the potential laborshed area for Columbus. Figure One includes a map outlining the geographic area which has been defined as the Columbus Labor Study Area.

An important resource for new or expanding businesses is a readily available supply of workers. Whether an employer requires 5 or 500 workers, they need to have confidence there will be a sufficient number of workers available to meet their labor requirements. This report is provided as a key analytical tool to identify and quantify the number and selected characteristics of workers available in the Columbus Labor Study Area.

Available labor supply is defined as the number of persons who would potentially apply for employment when a job becomes available. Potential workers are categorized into

two groups; those currently employed who would consider other employment opportunities and those who do not currently have a job.

One factor contributing to the available supply of workers is the willingness of workers already employed to change jobs. Factors influencing this decision are related to wages, fringe benefits, hours, and working conditions. Generally, workers are more inclined to change jobs when the wages and benefits for the potential new job are better and/or when they are optimistic about the economy.

Factors contributing to the available supply of people without jobs include the unemployment rate, labor force participation, and migration. To be classified as unemployed, an individual must have been actively looking for work in the last four weeks unless they were expecting recall from a layoff or waiting to start a job within 30 days.

There are also potential workers that are classified as not presently in the labor force. These individuals may not be participating in the labor force as employed or unemployed workers for various reasons. They may be unable to work because of school or family responsibilities, or they may have an illness that has prevented them from becoming part of the labor force. There may also be workers who have not been able to find employment in the past and have become discouraged or who are no longer actively seeking employment because they perceive there are no attractive job opportunities available in the area. Retired persons are also classified as not in the labor force, although this population group often can provide substantial labor resources for selected business operations. Within the group of persons not currently in the labor force, and therefore not actively seeking employment, are many individuals who would accept a job with attractive working conditions, competitive wages, and employee benefits if one became available.

Population migration is another factor that affects the available labor supply of potential workers who are not presently employed (and may not be seeking work within the local labor market). Persons without jobs and who perceive that there are no job opportunities available locally are the most likely to leave (migrate out) the area for employment opportunities elsewhere.

### **Labor Force and Employment**

Table One provides data showing labor force and employment trends for the Columbus Labor Study Area and for Platte County for selected years from 2016 to 2021. Data in Table One (Part A and Part B, next page) provide two alternate measures of employment for two distinct areas. Data presented in Table One, Part A include labor force, unemployment, employment, unemployment rate, and nonfarm wage and salary employment data for the entire Columbus Labor Study Area (see Figure One). As these data indicate, the total labor force and total employment for the laborshed area as a whole both increased, with the area labor force increasing by 4.0 percent between 2016 and 2021 and total employment increasing by 4.9 percent during the same period.

The second employment measure presented for the Columbus Labor Study Area, nonfarm wage and salary employment, rose from 56,285, in 2016, to 56,490, in 2021, an increase of 0.4 percent. In the case of the labor force data (labor force, unemployment, and employment), the respective measures are based on the county of residence. The nonfarm wage and salary employment data are measured based on the county of employment, irrespective of the place of residence of the workers.

<sup>(a)</sup> The Labor Area includes Platte County, Nebraska and the eight contiguous Nebraska counties (Boone, Butler, Colfax, Madison, Merrick, Nance, Polk, and Stanton).

<sup>(b)</sup> The labor force data are measured based on the county of residence, irrespective of the county of employment.

<sup>(c)</sup> The Nonfarm Employment data are for wage and salary employment and are based on the place (county) where the individual is employed, irrespective of the county of residence.

Source: U.S. Bureau of Labor Statistics, [www.bls.gov/cew/](http://www.bls.gov/cew/).

The labor force and employment measures presented for Platte County (Table One, Part B) indicate that the total labor force in the county increased by 7.4 percent between 2016 and 2021, with total employment (of people residing in Platte County, irrespective of their county of employment) increasing by 8.8 percent during this period. It is also of interest to note that unemployment decreased by 33.6 percent, from 592, in 2016, to 393, in 2021.

As previously noted, the second employment measure presented for Platte County, nonfarm wage and salary employment, is based on the county where the person is employed irrespective of their county of residence. Nonfarm wage and salary employment in Platte County increased by 4.6 percent between 2016 and 2021. Data presented in Table One, Part B show that the fastest growing employment sector in Platte County during the 2016–2021 review period was the Manufacturing sector, recording a 12.3 percent increase between 2016 and 2021. In the case of the Total Government

sector, employment in the State Government sector increased by 0.8 percent while Federal Government sector employment increased by 0.7 percent and Local Government sector employment increased by 1.0 percent.

A review of the employment data reported for the Columbus Labor Study Area (Table Two) indicates differences between the nonfarm wage and salary employment reported in each of the counties and the total employment of persons living in these respective areas. In the case of the entire Columbus Labor Study Area, nonfarm wage and salary employment was reported to be 56,490 in 2021, which was significantly less than the reported total employment of persons living within the eight-county Columbus Labor Study Area (63,097).

<sup>(a)</sup> Labor force and employment data are measured based on the county of residence.

<sup>(b)</sup> Nonfarm Employment data are for wage and salary employment and are based on the place (county) where the individual is employed, irrespective of the county of residence.

<sup>(c)</sup> Agricultural employment data are for 2019.

Sources: Labor Data - U.S. Bureau of Labor Statistics, [www.bls.gov/lau/#data](http://www.bls.gov/lau/#data).

Farm Employment Data - U.S. Bureau of Economic Analysis, Regional Accounts Data, [www.bea.gov/regional/reis/](http://www.bea.gov/regional/reis/).

There are two major reasons for differences in the total employment and nonfarm employment values. First, nonfarm wage and salary employment excludes self-employed workers, unpaid family workers, workers in certain not-for-profit organizations, and several other small (primarily seasonal and farm) worker categories—these workers are included in estimates of total employment. Second, estimates of nonfarm wage and salary employment are based on the area where the jobs (businesses) are located, while estimates of total employment are based on the area where workers live.

Table Two also includes information on agricultural employment, which includes farm proprietors. As shown in Table Two, 6,181 people in the Columbus Labor Study Area, were employed in agriculture in 2019. It is important to note that for Nebraska as a whole, approximately 56.6 percent of principal farm operators reported at least some off-farm employment, and approximately 37.9 percent reported they worked more than 200 days off the farm.

The number of nonfarm wage and salary workers in the Columbus Labor Study Area is shown by major industry sector and by county in Table Three. The reader is reminded that nonfarm wage and salary workers are counted in the county where they are employed. Individuals with more than one job are counted at each establishment (and in each county) where they work. Table Three provides information about the number of workers in the labor area by county and major industry category.

Source: U.S. Bureau of Labor Statistics, [www.bls.gov/cew/](http://www.bls.gov/cew/).

In addition to displaying the number of workers by major industry sector, Table Three also compares the percentage distribution of workers by industry in the Columbus Labor Study Area with the distribution for the State of Nebraska. As these data show, the industry distribution of employment for the Columbus Labor Study Area is significantly different than that for Nebraska as a whole.

The most significant deviations between Nebraska and the Columbus Labor Study Area occur in the Manufacturing sector employment, with 17.9 percent of nonfarm wage and salary workers in the Columbus Labor Study area employed in that sector, compared to 10.3 percent for Nebraska. Conversely, only 14.7 percent of nonfarm wage and salary workers in the Columbus Labor Study Area are employed in the All Other Services sector, compared to 25.6 percent for Nebraska as a whole.

Table Four, Part A provides data showing labor cost comparisons, by county, for all private wage and salary workers for the Columbus Labor Study Area. It is important to remember that the wage and salary employment is reported by county of employment and does not provide an indication of the average weekly and annual wage for residents of the respective counties. Obviously, labor cost is an important consideration in any analysis of the labor availability in an area. Pay data for workers covered by unemployment insurance laws in Nebraska are the source of the labor cost information. Average annual

pay is calculated by dividing the total payroll for wage and salary workers by the average annual number of employees.

A review of the data in Table Four, Part A indicates that average annual salaries in Platte County (\$47,853) for all wage and salary employees for all private industries are slightly higher than those for the Columbus Labor Study Area as a whole. Also, Platte County average annual salaries are \$6,072 (11.3 percent) less than the state average. Average annual salaries for the Columbus Labor Study Area (\$47,725) were \$6,200 (11.5 percent) less than the Nebraska average. These data suggest, of course, there would be a positive labor supply response in Platte County to the creation of additional employment opportunities with competitive wages and benefits.

<sup>(a)</sup> Includes employers that are subject to Nebraska Employment Security Laws.

Source: U.S. Bureau of Labor Statistics, [www.bls.gov/cew/](http://www.bls.gov/cew/).

Table Four, Part B provides average annual wages, by county and by major industry sector, for the counties that make up the Columbus Labor Study Area. As the data in Table Four, Part A indicate, the highest overall average annual wages in the area are for wage and salary workers employed in Stanton County, Nebraska. The average annual wage for all wage and salary workers (working) in Stanton County, Nebraska, was \$70,563 in 2021, which was \$22,838 (47.9 percent) higher than the average for the Columbus Labor Study Area as a whole, and \$16,638 (30.9 percent) greater than the Nebraska average. A review of the industry-specific data for average annual wages for Stanton County, Nebraska, indicates that the high average annual wage results from the extremely high average wages in the Goods Producing industry group.

Table Five provides information on entry, average, and experienced wages for selected occupations across all industry groups for businesses located in Platte County, Nebraska. Entry level and experienced wage rates represent the means of the lower third and upper two-thirds of the wage distribution, respectively.

### **Commuting Patterns**

Table Six provides data from the 2020 U.S. Census, Longitudinal Employer-Household Dynamics Program, showing commuting patterns for workers living in the Columbus Labor Study Area. Data in Table Six indicate a significant number (and percentage) of workers in the area commuted outside of their county of residence for employment. Data for Platte County indicate that 5,754, or 36.0 percent of the employed workers, commute to other counties for employment.

**Table Six**

Table Seven provides further detail illustrating the willingness of workers in Platte County to travel for employment. In 2020, residents of Platte County worked at a total of 15,963 jobs; a resident could work at more than one job. Of these 15,963 jobs, the largest number, 10,209 or 64.0 percent, were located in Platte County. Counties with high numbers of workers from Platte County were Colfax County, Nebraska (1,096 jobs), Douglas County, Nebraska (1,069 jobs), and Madison County, Nebraska (670 jobs).

Table Eight provides data showing the willingness of workers in other counties to commute to Platte County for employment. Data in Table Eight indicate 10,209 (57.6 percent) of the 17,739 primary jobs in Platte County were held by workers commuting from other counties. In 2020, Colfax County, Nebraska, was home to the greatest number of workers commuting into Platte County for primary jobs, 980 or 5.5 percent. Other counties with large numbers of workers commuting into Platte County for their primary jobs included Butler County, Nebraska, 720 or 4.1 percent; Madison County, Nebraska, 597 or 3.4 percent; Polk County, Nebraska, 442 or 2.5 percent; Douglas County, Nebraska, 393 or 2.2 percent; Nance County, Nebraska, 267 or 1.5 percent; and All Other Locations, Nebraska, 4,131 or 23.3 percent.

Table Nine provides data for Platte County, showing the number of primary jobs (Workforce) located in the county and the number of primary jobs held by county residents (Labor Force Employment) by industry in 2020. When the Workforce for an industry exceeds the Labor Force (positive values in the last column of Table Nine), the difference between these values represents the net number of jobs in Platte County held by workers commuting into the county from other areas. If the Workforce is less than the Labor Force (negative values in the last column of Table Nine), the difference represents the net number of jobs held outside of Platte County by county residents.

As data in Table Nine indicate, residents of Platte County were employed in 15,963 primary jobs in 2020, but there were 17,739 primary jobs within the area. This indicates nonresidents commuted to at least 1,776 primary jobs inside the study area.

## Population Trends

The data provided in Table Ten show population trends for the Columbus Labor Study Area, by county, and for Nebraska for the period 1990-2022. The Columbus Labor Study Area population increased by 4.6 percent from 1990 to 2020 and decreased 0.4 percent from 2020 to 2022. Population in Platte County totaled 29,820 in 1990 and increased by 15.0 percent from 1990 to 2020. From 2020 to 2022, Platte County population remained flat.

**Table Ten**

Table Eleven shows the age distribution of the resident population. Obviously, the age distribution of the population is important when evaluating the potential labor supply in an area. A key variable is the number of people in the working age populations of the counties making up the Columbus Labor Study Area.

Information in Table Thirteen shows recent changes in the racial (“White Alone” and “Not-White Alone”) and ethnic (“Hispanic” and “Non-Hispanic”) composition for the resident populations of Platte County, the Columbus Labor Study Area, and Nebraska statewide. As shown in Table Twelve, total Platte County population increased by 8.1 percent during the twenty-one-year period while the Hispanic population increased by 241.1 percent and the Not-White Alone and Non-Hispanic population increased by 1,031.5 percent. Over the same period, Columbus Labor Study Area population decreased by 0.4 percent while the Hispanic population increased by 127.0 percent and the Not-White Alone and Non-Hispanic population increased by 678.9 percent. Statewide, population increased by 14.0 percent from 2000 to 2021, while the Hispanic population increased by 138.0 percent and the Not-White Alone and Non-Hispanic population increased by 172.2 percent.

Table Fourteen provides information showing population, the natural increase (births minus deaths) and net migration for the period 2000–2010 for Nebraska, for Platte County, and for the Columbus Labor Study Area. As these data show, the Columbus Labor Study Area as a whole experienced net out-migration during the Census decade of the 2000s. As indicated in the table, net out-migration for the Columbus Labor Study Area as a whole accounted for a population decline of 7,515 people during the decade, contributing to a population decrease equal to only 6.4 percent of the population. In the case of Platte County, net out-migration during the 2000s totaled 1,594 people, or 5.0 percent of the 2000 population.

Table Fifteen provides information showing population, the natural increase (births minus deaths), and net migration for the period 2010–2020. As these data show, the Columbus Labor Study Area experienced significant net out-migration during this more recent ten-year period. As indicated in the table, out-migration for the Columbus Labor Study Area as a whole accounted for population decline of 3,997 during the 2010–2020 period, contributing to a population decrease equal to 3.5 percent of the 2010 population. In the case of Platte County, net out-migration during this ten-year period was 219, or 0.7 percent of the 2010 population.

Table Sixteen provides information showing population, the natural increase (births minus deaths), and net migration for the period 2020–2022. As these data show, the Columbus Labor Study Area experienced significant net out-migration during this more recent two-year period. As indicated in the table, out-migration for the Columbus Labor Study Area as a whole accounted for a population decline of 5,638 during the 2020–2022 period, contributing to a population decrease equal to 4.8 percent of the 2020 population. In the case of Platte County, net out-migration during this two-year period was 2,276, or 6.6 percent decrease of the 2020 population.

### **Competitive Employment and Career Opportunities**

An employer providing jobs with competitive wages and benefits and offering career opportunities would be a welcome addition to the employment base in the Columbus Labor Study Area and in Platte County. The expected response to such employment opportunities would be significant, and it is anticipated that there would be an adequate labor supply response for a prospective new employer offering competitive wages and benefits in the Columbus area. The labor force, employment, and demographic data presented in this report illustrate quite clearly that there is a sufficiently large labor force and population base living within the Columbus Labor Area, and that significant numbers of persons living in the area are commuting to other areas for employment.

In conclusion, the data and analysis presented in this report indicate that the Columbus Labor Study Area and Platte County would be able to provide a significant number of dedicated and skilled workers to meet the needs of additional employers in the area. While this report has not estimated a precise number of people that might be available to a prospective new employer in the Columbus area, it is anticipated that if attractive working conditions with competitive wages and employee benefits were offered, a prospective new employer would be able to select their workforce from a substantial pool of applicants.
