Hunters should watch for fluctuating water levels

COLUMBUS, Neb. — Loup Power District wants to remind the public that water levels may fluctuate along the Loup River from the Genoa Headworks to Columbus and along the Platte River from Columbus to Schuyler.

Hunters with blinds along the rivers and others using the river for fishing, camping, or recreation should be on the lookout for changing water levels and take measures to ensure they are not stranded away from dry ground.

Changes in diversion of the Loup River at the Genoa Headworks are necessary during the fall and winter to reduce ice and slush in the Loup Canal.

###

ABOUT LOUP POWER DISTRICT: For more than 80 years, Loup Power District has provided reliable, low-cost electricity to customers in Boone, Colfax, Nance and Platte Counties and part of Madison County. The District also provides economic development and five parks in these areas. More information about Loup is available at www.loup.com.
