FISH SAMPLING

## **STUDY 6.0            FISH SAMPLING**

Based on the widely accepted view that the Loup Power Canal is a healthy and important recreational fishery, and due to the lack of scoping-derived issues related to this fishery, the District announced its intention during the May 27-28, 2009, Study Plan Meeting to exclude this study from the Revised Study Plan. As all meeting participants accepted this proposal without objection, the District will not perform or commission any level of fish sampling in the Loup Power Canal in association with Project relicensing.

Details that support the exclusion of fish sampling in the Loup Power Canal are provided in the Revised Study Plan as Response 4.0, Fish Sampling of the Loup Power Canal.
